

## Update Instructions:

Before running the update log into Realoz Software and note down the data file path. F12 or Help > Realoz Main Menu.

Make sure ALL users are closed out of Realoz and you have backed up your data file BEFORE downloading the update.

### Server Update:

- Step 1** Download current update from <http://www.realoz.com.au/files/realoz2011.exe> or by the new web site downloads area and save to server updates folder (O:\Updates).
- Step 2** Run the update on the server. Find the update folder and double click Realoz.exe, ensure the destination directory reads C:\Omnis7 before clicking next. (All workstations to be closed out of Realoz while this is done)  
Note – If you use property management and have a separate icon for this on your desktop, you will also need to copy the update from C:\Omnis7\Realoz.lbr and paste into this location and rename to Realozpm.lbr
- Step 3** Open Realoz and reattach the datafile (as per location noted down prior to starting update)
- Step 4** Check the update has worked by selecting the main menu and ensuring the version and build now reads the same as the update email you have received.

### Workstation Update:

- Step 1** Download current update from <http://www.realoz.com.au/files/realoz2011.exe> or by the new web site downloads area and save to server updates folder (O:\Updates).
- Step 2** Run the update on each workstation by selecting the realoz.exe file from O:\Updates (All workstations to be closed out of Realoz while this is done)  
Note – If you use property management and have a separate icon for this on your desktop, you will also need to copy the update from C:\Omnis7\Realoz.lbr and paste into this location and rename to Realozpm.lbr
- Step 3** Open Realoz and reattach the datafile (as per location noted down prior to starting update)
- Step 4** Check the update has worked by selecting the main menu and ensuring the version and build now reads the same as the update email you have received.
